4:00 PM - 5:00 PM Technical Program (1.0 PDH)

## WORKSHOP

### Stego Industries, LLC - Game Changing Technology

Stego Industries, LLC is involved in the research, design, development, production, and marketing of proactive moisture mitigation solutions for use in various construction-related applications. Most notably, Stego Industries manufactures the most widely specified under-slab Vapor Barrier in the United States having earned the respect, trust and recommendation of the design and construction community. EPA mandated water-based adhesive products, new energy codes, and the growing liability for mold and contaminants have forced the building industry to re-evaluate and switch to cost-effective, solution-oriented products which will help control moisture, soil gases and other contaminants. Stego Industries recognizes the complex and controversial nature of these moisture/contaminant-related problems facing architects, engineers, flooring installers, contractors and building owners.

The educational session will address under-slab moisture mitigation strategies by reviewing the most recent and relative standards, building codes and industry—expert recommendations. The seminar will also review available products currently available on the market, including some controversial discrepancies between test results reported on product datasheets and actual product performance in the field. The presentation will include standardized installation practices at several project conditions, including a variety of slab/foundation designs over differing sub-base selections and expansive soils.

Stego® Industries brings game-changing technology to the construction market at light speed. Stego is the industry leader in below-slab moisture vapor protection in North America. Our sub-slab barrier systems are a critical component in the design and construction of efficient, durable, and healthy buildings. We have earned the respect, trust, and recommendation of the architectural, engineering, and construction community through our commitment to education and technical support. To learn more about our game-changing barrier solutions and get in contact with a Stego representative in your areas, please visit [www.stegoindustries.com](http://www.stegoindustries.com)

**Speaker:** [Jerrad Jefferson](#), South-Central Regional Associate, [Stego Industries](#), Tel. (979) 221-7030

Jerrad Jefferson is the South Central Regional Associate with Stego Industries. Jerrad has been trained in continuing education (CES) guidelines and is highly knowledgeable in the field of below-slab moisture protection. Jerrad has been continually studying the latest theory for design and implementation of overall below-slab moisture protection systems, including active participation in system design and actual product installation in the field.
