StormVoid Applications

Presented by [Mr. John Snyder](#) with [VoidForm Products, LLC](#)

BIO: John Snyder is VP of Engineering at VoidForm Products, LLC, working from the Fort Worth facility. John has over 40 years of experience with product design, manufacturing and installation of various construction related products. He is also currently co-chair of the FPA Committee updating FPA-SC-11 Specification and Application of Void Spaces Below Concrete Foundations.

ABSTRACT: When it comes to foundation performance, guarding against damage due to expansive soils can be a

significant challenge. Corrugated Paper Void Cartons have been around for decades to create a separation or void space between foundation and underlying soils. But the one drawback to corrugated paper is if it gets wet it loses the strength required to support placement of wet concrete. With the introduction of StormVoid in 2013, VoidForm Products has solved the weather issue with this waterproof void carton product. StormVoid is available in standard and custom shapes to meet the needs of any project.
